

LEADER — COMMAND HANDBOOK

Fixed version • Moderation, media protection, warnings & moderator alert system

IMPORTANT PASSWORD RULE

The password **admin@151093** is required **ONLY** for the six moderator-alert configuration commands listed in the Alert System section. It is NOT required for normal moderation, media, warning, or help commands.

1. MEDIA-ONLY CHANNEL

?setmedia – Configure the current channel as media-only. Photos and videos are allowed; text-only messages are removed. The bot periodically checks the latest 10 messages to enforce the rule.

?setmedia off – Disable media-only mode for the current channel.

In a media-only channel, commands belonging to another bot are removed along with the bot's response when applicable. The bot ignores its own messages.

2. WARNING SYSTEM

?warn @user [reason] – Give a moderator warning. No password required.

?warns @user – Show the user's warnings for the current day, including automatic and moderator warnings. No password required.

?unwarn @user – Remove a warning according to the bot's warning-system implementation. No password required.

Anti-spam: if a user sends the same message 3 times back-to-back within 1 minute, the bot automatically issues a warning.

Three warnings in the same day trigger a 1-hour jail/timeout. This applies whether the warnings were automatic or issued by a moderator.

3. MODERATOR ALERT SYSTEM — PASSWORD REQUIRED

Password: **admin@151093**

Command	Purpose	Example
?setmodalert	Set the current channel for inactive-moderator alerts.	?setmodalert admin@151093
?setalerttime	Set the daily alert time.	?setalerttime 7:30am admin@151093
?setminreqvc	Set the daily minimum VC requirement.	?setminreqvc 3h admin@151093
?setminreqchat	Set the daily minimum chat-message requirement.	?setminreqchat 300 admin@151093
?setvcmod	Set the role treated as VC moderators.	?setvcmod @VC Mod admin@151093
?setchatmod	Set the role treated as chat moderators.	?setchatmod @Chat Mod admin@151093

All alert requirements are **per day**. The alert system compares each moderator's daily activity against the configured VC-hours and chat-message requirements and sends alerts in the configured alert channel at the configured time.

4. COMMUNITY ACTIVITY

?activity on / ?activity off – Enable or disable the community activity system.

?activity status – Show current activity settings.

?activity test – Test an activity prompt.

?activity cooldown 30m – Set the prompt cooldown.

?activity tags 5 – Set the number of users tagged.

?activity quiet 12am-7am – Set quiet hours.

?activity category gaming – Set the question category.

5. OTHER MODERATION COMMANDS

?purge [amount] – Delete recent messages when the user has the required moderation permission.

?setnick @user nickname – Change a member's nickname with the required permission.

?giverole @user @role – Give a role with the required role-management permission.

?removeole @user @role – Remove a role with the required role-management permission.

6. COMMAND GUIDE

?modpdf – Request this command handbook. No password required.

The old **?commands** name is replaced by **?modpdf**.

7. EXAMPLE SETUP ORDER

1. Run **?setmodalert admin@151093** in the channel where alerts should appear.
2. Run **?setalerttime 7:30am admin@151093**.
3. Run **?setminreqvc 3h admin@151093**.
4. Run **?setminreqchat 300 admin@151093**.
5. Run **?setvcmod @VC Mod admin@151093**.
6. Run **?setchatmod @Chat Mod admin@151093**.

After configuration, the alert system uses the saved settings for daily moderator activity checks.
